

Q. 1  $T(n) = 3T(n/2) + n$

Ans.

Master's theorem

comparing,  $a=3$ ,  $b=2$ ,  $f(n)=n$

$$\log_b a = \log_2 3 = 1.58$$

$$n^{\log_b a} = n^{1.58}$$

$$f(n) = n$$

$$n^{\log_b a} > f(n)$$

case 1:

$$\therefore T(n) = \Theta(n^{\log_b a})$$

$$= \Theta(n^{1.58})$$

# Recursion Tree

$$T(n) = 3T(n/2) + n$$

continues till  $n/n = 1$  i.e.  $2^i = n$

$$\therefore i = \log_2 n$$

$$\text{At this level, cost} = 3^{\log_2 n}$$

$$= \log n^{\log_2 3}$$

$$\text{Total cost} = n + 3n/2 + 9n/4 + \dots + n^{\log_2 3}$$

$$= O(\log n)$$

$$= O(n^{\log_2 3})$$

$$= O(n^{1.58})$$

[illegible]

Shortest  $a_i = 4$

6)  $bd$  is shorter

7)  $fg$  is shorter

8)  $ch$  is shorter

$$\begin{aligned} \text{MST} &= 4 + 6 + 2 + 7 + 10 + 5 + 3 + 8 \\ &= \underline{45} \end{aligned}$$

Q. Find MST for foll. (Kruskal)

ab	bf	fg	gh	ch	ci	ai	ac	bd	dc	df	ef	eg	eh
13	15	8	12	10	11	4	6	7	2	5	3	9	14

Asc

2	3	4	5	6	7	8	9	10	11	12	13	14	15
dc	ef	ai	df	ac	bd	fg	eg	ch	ci	gh	ab	eh	bf
✓	✓	✓	✓	✓	✓	✓	✗	✓	✗	✗	✗	✗	✗

- Final Answer

$$MST = 2 + 3 + 4 + 5 + 6 + 7 + 8 + 10$$

$$= \underline{45}$$

Kruskal step by step

$$\begin{aligned} \text{MST} &= 4 + 6 + 10 + 2 + 7 + 5 + 3 + 8 \\ &= \underline{45} \end{aligned}$$
